

The ARRL restructuring proposal is the right approach. Most of the new amateur radio operators today could care less about CW and have found interests in the digital modes, which in my opinion offer a more reliable means of communicating. In times of local emergencies, digital modes of communication have proven to be more reliable in getting the job done, the same could be done by CW, but only with the aid of computer software. CW was fine years ago, but as technology changes, so should the requirements to get a license. Most other countries have dropped the requirement, and to aid the FCC in streamlining its organization, the FCC should agree with the ARRL proposal. Thank you
